

## Automated Stair Climbing Robot

This project is about building an automated robot which will find its track on its own, and will also sense the stairs and climb it. It will be able to overcome any obstacle that comes in its way. Nowadays engineers are trying to solve daily routine problems with the concept of engineering, and making the lives of people easier and easier. The concept of robots are getting more and more popular these days, as they prove more efficient than humans. Today robots are also used for fun and games, and numbers of tournaments are also arranged on the games based on robotics. So its a machine which provides work, knowledge and entertainment as well. The main concept of this project is to reduce the human presence in dangerous areas; it can also be used in space programs and can also come handy in rescue missions.
