

## Studies on Divergent Series and Summability, Vol. 1 (Classic Reprint)

During the academic year 1908-9 the author was privileged to give as a part of his work at the University of Michigan a course of lectures on infinite series, with especial reference in the second semester to divergent series a subject which, despite the uncertain value so long attached to it, seemed clearly to be coming into increasing prominence and importance in mathematical analysis. Little was accomplished, however, as regards divergent series beyond the merest beginning; yet this was sufficient to awaken a desire to continue farther and this in turn resulted in a course being given throughout the whole of the following year devoted entirely to divergent series and the related topic of summability. But this year also closed with much less ground satisfactorily covered than had been expected, unforeseen difficulties having arisen from time to time, some due to the inherent complexities of the subject in hand and others to the somewhat hastily conceived and hence unsatisfactory state in which much of the related literature was found to be. Thus the course still seemed altogether incomplete. It was therefore decided to continue it once more throughout the following year, 1910-11, and indeed for a like reason it was finally continued throughout 1911-12. As the lectures and class-room discussions progressed, permanent notes were kept in the hope that the whole might possibly pass through the press at some future time and appear in book form a hope which, after various delays during which the original notes have been considerably supplemented, now reaches its realization in the appearance of the present volume. In its final form it certainly presents a large mass of detail and is doubtless open to criticism in many respects, but it does not seem advisable to attempt any further defence for it than is contained in the remaining sections of this preface
