

# Dams, Fish and Fisheries: Opportunities, Challenges and Conflict Resolution (FAO Fisheries Technical Papers)

Have reservoir fisheries been successful in replacing river fisheries? Which migration mitigation measures exist and how effective are they? What is the information base and capacity required for effective management of fisheries through a dam project cycle? What are the existing criteria and guidelines concerning dams and fisheries? The four papers presented in this publication address major fishery issues in relation to dams as identified by the World Commission on Dams (WCD) and FAO for the purpose of WCDs global reviews on Dams and Development.
