

An Introduction to the Study of Science: A First Course in Science for High Schools (Classic Reprint)

Excerpt from An Introduction to the Study of Science: A First Course in Science for High Schools

The purpose of the book is to introduce boys and girls in their first science course in high school to a scientific study of some of the principal features of their environment. Such an introductory course in the scientific study of common things is now generally recognized as an essential part of the educational opportunities afforded by our secondary schools. The general method of the book in dealing with the topics, or projects, selected for study is broadly inductive or heuristic, the presentation following the time order of mental development of boys and girls as closely as effective teaching permits. This emphasis upon the psychological rather than the traditional logical or dogmatic method of procedure aids in realizing the purpose of the book, which is to guide students in the development of a scientific habit of mind, that is of a method of investigating and mastering their projects and problems, which is economical as well as effective. By dealing intensively and extensively with significant and typical features of everyday experience, the student is led to observe intelligently and with a definite purpose dominating his observation, to test experimentally the observations, and in due course to form a working understanding or theory of the subject under consideration. This is vastly more educative and valuable than any fund of so-called useful information a textbook may offer. The information, therefore, which is given in the book is to be used as a tool or means of understanding and acquiring better control of the situation in hand; it is not for the sake of some possible future emergency that may never occur. Such a course as is here outlined helps to fulfil the function of scientific instruction in our public schools. This function is conceived to be the initiation of

young students into what scientific thought has accomplished for the human race. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
