

Bulletin of the Bureau of Fisheries Volume 11

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1893 Excerpt: ...Leptodora hyalina, Bosmina longirostri and some undetermined cyprids, Stylaria IttCUstris and other annelids, and an abundance of Hydra fusca of the brick-red variety. The most abundant thing was Daphnella brachyura, and the next Diaptomus. The Cyclops was common, as were likewise ephemerid larvie and the small bivalve entomostracans Eurycercus and Acropcrus. The towing-net collections, made in the open water some little distance from the shore, contained a much smaller variety, all entomostraca and hydrachnids. The latter were few in number, noticed only in a single haul. By far the most abundant species were Diaptomus sicilis (?) and Daphnella brachyura, sometimes one predominating and sometimes the other. With these were Leptodora and an occasional Daphnia. The abundance of fishes in the lake was shown by-the fact that our trammel net, simply stretched in the open water in the evening and lifted at noon the following day, contained 87 fishes, 12 of them trout, the remainder suckers and chubs, the latter most numerous. At another setting of this net, near the mouth of Witch Creek, in 8 to 10 feet of water, 10 trout, 2 chubs, and 65 suckers were taken in six hours. YELLOWSTONE RIVER SYSTEM. Yellowstone River drains all the eastern and northern side of the National Park, more than half its area, and from these waters much the larger part of our collections was taken. Yellowstone Lake was visited both years; Pelican Creek and smaller tributaries at the northern end were searched; and Yellowstone River was examined at intervals from the lake to the mouth of the Lamar or east fork. The

smaller tributaries of this system examined were Alum Creek, Tower Creek, Slough Creek, Lamar River, Amethyst Creek, Soda Butte Creek, Blacktail Deer Creek, L...
