

A Guide to the Fossil Remains of Man in the Department of Geology and Paleontology in the British Museum (Natural History) With 6 Plates and 14 Text-Figures (Classic Reprint)

Pittdown skull has aroused so much interest in the study of fossil man, that this small Guide has been prepared to explain its significance. Most of the known specimens important for comparison are represented in the exhibited collection by plaster casts ;and near these, in the same and adjacent cases, are arranged both human implements and associated animal remains to illustrate the circumstances under which early man lived in western Europe. Thanks are due to the Council of the Geological Society for permission to reproduce Figs. 4(A, B), 5, 6(A, B, D), 8-9 (A, B, D), and 13, from the Society's Quarterly Journal. A. SMITH WOODWARD. DEPARTMENT OF GEOLOGY, December, 1914. P.S. For the third edition of this Guide, the latter part has been re-written and extended to include an account of the new species of man lately found in a cave at Broken Hill, Northern Rhodesia. A. S. W. DEPARTMENT OF GEOLOGY, March, (Typographical errors above are due to OCR software and do not occur in the book.) About the Publisher Forgotten Books is a publisher of historical writings, such as: Philosophy, Classics, Science, Religion, History, Folklore and Mythology. Forgotten Books Classic Reprint Series utilizes the latest technology to regenerate facsimiles of historically important writings. Careful attention has been made to accurately preserve the original format of each page whilst digitally enhancing the aged text. Read books online for free at www.forgottenbooks.org
